

Roller-on Shut-off Tube

For quick and direct application of high viscosity lotions and creams while simultaneously soothing and massaging, this roll-on dispenser is paired with a portable, easy-grip tube for reviving skin on-the-go. The PE/5 layer co-ex tube is available from 60ml to 120ml capacity and can be promoted as a refillable pack by simply retaining the applicator and replacing the tube. The metal roller has a cooling effect on the skin; consistently delivering the optimum amount of product directly to the face in just a few gentle swipes. The roller can also be made in TPE or silicone.
