

Spatula Shut-off Tube

The 'Spatula Shut-off Tube' is an innovative pack with an integrated TPE applicator for direct application of soothing gels, lotions, masks or cream formulas. Combined with an easily squeezable tube, the soft and flexible spatula ensures effective and gentle product transfer, whilst simultaneously massaging for a pampering home-spa experience. Paired with an ergonomically shaped elliptical tube that fits comfortably into the hand, the TPE applicator can be easily washed to ensure a high level of hygiene. For an eco-friendly approach, this screw-neck pack is offered with a refillable PE tube (40-70ml) and reusable TPE applicator to minimise waste packaging. The innovatively designed overcap automatically releases and locks the dispenser to eliminate leakage. Essential for portability, the convenient auto-closing shut-off patented system engages when the PP over-cap is in place, eliminating mess and waste.
