

Harmony PP Airtight Refill Slimstick (Mono-Material)

Meet an evolution of HCP's popular stock Airtight Slimstick... the Harmony PP Airtight Refill Slimstick! Redesigned for the age of sustainability, this sleek flush-fit item now has a mono-material construction in all-PP, plus a refillable mechanism. A versatile choice for long-lasting lip colour, lip balm or complexion products such as concealer or colour corrector. Whilst meeting the sustainability pillars of 'ready-to-recycle', 'reuse' and 'reduced packaging waste', this slimstick retains the airtightness essential for effective product preservation: the double-ring construction has a noticeable click-closure for both airtight sealing and protection of the product. As the lipstick is PP mono-material and so 'ready to recycle', it complies with the EU Plastic Levy and UK Plastics Pact, as well as contributing to the circular economy. This refillable lipstick also reduces the environmental impact by decreasing plastic waste (8.3T of plastic reduced for every 1 million pieces*) and lowering CO2 emissions by minimising the need to re-manufacture single use packaging, whilst also lowering energy and water consumption. The cup diameter is designed to accommodate a 8.3mm top fill bullet and the pack is complementary to the extensive Fusion Round range. *Based on 50% of consumers refilling the pack 3 times.
