UNO Push Button Dropper 50ml

HCP's new 'UNO Push Button Dropper' features a mono-material engine; a sustainable format that is ready-to-recycle. The dropper engine is constructed from mono-material PP & PE polyolefin family. To remove contamination in the recycling stream, the engine is constructed with a plastic spring, while traditional rubber/silicone dropper bulbs and glass pipettes are also replaced with PP. This ready-to-recycle packaging solution combines sustainability, convenience, controlled dosing and hygiene; offering streamlined dispensing of skincare and cosmetics products. The 'UNO Push Button Dropper' is offered with a 50ml PETG or PP bottle and is suited to various low viscosity skincare formulas, including serum and essence.

HCP Ref:
Dropper: 702F (Pilot Tool)
Bottle: 702S
